

SW Engineer - Localization

Location: Plovdiv, Bg with US and EU travel

Status: Full-Time

Organization: SW Engineering

Description:

At Opticentre our vision is to advance the future of localization technology and processes. We are the world's first hosted solutions provider for major software companies who want to release their products in multiple countries on first day of release at lowest cost, with maximum velocity and highest quality.

Our team of dynamic, talented professionals currently has vacancies for Software Engineers to step into busy projects for our demanding clients.

We are looking for well educated professionals with a zero-tolerance quality threshold, personal flexibility, a love for team working, a passion for pressure and an enthusiasm for the world of IT. The right people will be provided the training, support and cultural environment equivalent to the best that US Silicon Valley has to offer – in Plovdiv.

Responsibilities:

- Work with Chief Software Engineer to design architecture, meet project timelines, and manage on-going production application.
- Maintenance of existing B2B and B2C web-based applications
- Writing and maintaining both internal and user documentation
- Troubleshooting applications in a production environment
- Writing, maintaining, and executing QA test scripts

Requirements:

- Relevant academic qualifications
- Minimum of 3+ years related software engineering experience with proficiency in three or more of standard SW build and install environments: WISE FOR WINDOWS INSTALLER, INSTALLSHIELD, ROBOHELP, FLASH, rich content tools, HTML HELP WORKSHOP, PERL, 4NT (batch scripting), etc

Please forward resumes to:
